Software Engineer with 1+ year of professional experience building .NET, React/TypeScript and AWS solutions, including the proof of concept for modernizing legacy .NET Framework 4.8 deployments onto AWS ECS. Seeking a Software Engineer role starting January 2027.

Education

Bachelor of Software Engineering August 2022 – August 2025
Sunway University & Lancaster University (Dual Award) · 3.37/4.00 CGPA

Professional Experience

Associate Software Engineer October 2025 – Present
Ideagen (Please Review)

- Built the proof of concept and drove R&D for moving legacy .NET Framework 4.8 applications onto AWS ECS with GitHub Actions and Terraform, after iterating across Azure DevOps, Azure Web Apps and ArgoCD.
- Replaced RDP, manual provisioning, and config editing with a dashboard (React, .NET) and XML config rendering tool; in testing, cut tenant onboarding and server upgrades from a few hours to under 30 minutes, with production rollout planned for 2027.
- Deliver feature enhancements, refactors and bugfixes in C#/.NET, TypeScript and MSSQL across the full software development lifecycle.
- Write unit tests, collaborate with QA and participate in code reviews to reduce regressions.

Software Engineering Trainee January 2025 – April 2025
Exabytes Enterprise

- Built a VM provisioning and validation tool (React.js, JavaScript, Express.js, REST APIs) requested by Exabytes' Singapore team to streamline handing VMs over to customers in day-to-day operations.
- Practiced infrastructure-as-code and CI/CD by deploying sample applications with Terraform, CloudFormation and AWS CDK, with pipelines in Jenkins and GitHub Actions.

Projects

GrabEx – AI-Powered Sales & Customer Retention Dashboard April 2025 | GitHub
UM Hackathon 2025 (1st Place) · *React.js, TypeScript, FastAPI, PostgreSQL, Gemini 2.5 Flash*

- Led a team of four to victory in a large-scale intervarsity hackathon with over 1,000 participants.
- Engineered a full-stack web platform to help Grab merchants re-engage lapsed customers and provide inventory suggestions through natural language prompts.

Almari – Remote File Manager August 2026 | GitHub
Personal Project · *React.js, TypeScript, Go, GitHub Actions*

- Built a remote file manager to browse, edit, upload and download files on another machine from the browser, shipped as a single Go binary with an embedded React frontend.
- Implemented multi-part uploads, zipped directory downloads, HTTP Range video streaming and cached thumbnails.
- Hardened file APIs against path traversal attacks and covered them with a unit test suite.
- Automated pre-release builds with GitHub Actions on version tags; tracked work in GitHub Issues.
